

Lab: Verify Product Sorting and Information Retrieval

Objective

Validate product sorting functionality and extract product details such as names and prices from the webpage.

Application URL

<https://www.bstackdemo.com/>

Test Steps

1. Navigate to the Webpage

- Open the browser
- Navigate to the given URL

Expected Result:

- The webpage should load successfully
-

2. Interact with the "Order by" Dropdown

- Locate the "Order by" dropdown
- Verify the dropdown is:
 - Visible
 - Enabled
- Select the option "Lowest to highest"

Expected Result:

- Products should be sorted from lowest price to highest price
-

3. Retrieve and Print Product Information

- Capture all **product price elements**
- Capture all **product name elements**
- Verify:
 - Number of product names = Number of product prices
- Print each product name with its corresponding price in the console

Expected Result:

<https://www.pavanonlinetrainings.com>

<https://www.youtube.com/@sdetpavan>

- Product names and prices count should match
 - All product details should be printed correctly
-

4. Identify and Print the Lowest Priced Product

- Get the **first product name**
- Get the **first product price**
- Print both in the console

Expected Result:

- First product should be the lowest priced item
-

5. Identify and Print the Highest Priced Product

- Get the **last product name**
- Get the **last product price**
- Print both in the console

Expected Result:

- Last product should be the highest priced item
